

CUSTOM ENGINEERING/PROVEN DURABILITY/STAGE-GATE QUALITY

With over 50 years of experience designing for harsh environments like manufacturing, medical, mining, construction, aerospace and military operations, MPC knows the right material for your label, nameplate or faceplate. Whether you need a fast quote or a custom designed nameplate for a harsh environment, our team will work with you to determine the right material, adhesive and fabrication tolerances for your application.

MPC manufactures durable nameplates, panel faceplates, overlays, labels, tags, and signs. Our materials are used where permanent identification of products and process are critical.

Products:

- **Nameplates** – also known as data plates or placards, nameplates identify a piece of equipment’s manufacturer, serial/model number, date of manufacture, load rating, electric specifications, operating/maintenance instructions and other data required by law. Available in metal or plastic.
- **Machine Faceplates** – also known as equipment panel fronts or machine control panels, panel faceplates function as the user interface for applications where durability is critical. Made of photosensitive anodized aluminum, MPC’s faceplates offer an attractive, detailed and durable barrier between electronic components and the operating environment.
- **Overlays** – made of polyester, polycarbonate or vinyl, overlays offer an attractive, full color user interface for membrane switches or other electronic components.
- **Labels & Tags** – available in metal or plastic, our durable labels & tags identify property, safety procedures, or contain serialized information to track equipment or other assets.
- **Signs** – Metalphoto signs are designed to remain readable for the life of your application, even in the harshest outdoor environments. Used for wayfinding, interpretative, and architectural signage, Metalphoto combines the rich, detailed quality of a photographic medium with the durability of anodized aluminum for unmatched longevity and a modern look.

Key Capabilities:

- **Custom Engineering** – We understand a broad array of applications and work with you to ensure your product is designed to meet those application environments.
- **Proven Durability** – MPC is one of the largest and most advanced producers of Metalphoto® products in the world. Metalphoto’s durability comes from its image which is sealed inside of the anodized aluminum, providing resistance to corrosion, sunlight degradation, abrasion, extreme temperatures and chemical exposure.
- **Stage-Gate Quality** – Quality is built into our design and manufacturing process. Each time your part moves from department to department, an inspection is performed to ensure graphic accuracy, fabrication tolerances and image durability.

Contact MPC for labels and nameplates customized to your application.
